Summary

AI Engineer with a B.Tech in Artificial Intelligence and Data Science and hands-on experience in building production-grade AI applications using Python, FastAPI, Gemini/OpenAI APIs, vector databases, and semantic search pipelines. Strong focus on Large Language Models (LLMs), prompt engineering, backend AI systems, model evaluation, and scalable deployment workflows. Currently transitioning full-time into AI engineering and actively building real-world GenAI products.

Skills

Languages: Python, SQL, JSON, JavaScript (basic)

AI / ML: Machine Learning, Deep Learning, NLP, LLMs, Generative AI, Prompt Engineering

LLM Stack: OpenAI API, Gemini API, LangChain, LangSmith, RAG, Semantic Search

Frameworks: FastAPI, Flask, Streamlit

Databases: AstraDB, MongoDB, PostgreSQL, Vector Databases

Deployment & Tools: Docker, Git, GitHub, Render, VS Code, Postman

Core Concepts: REST APIs, Async Programming, Backend Architecture, Evaluation Pipelines

Work Experience

Nirlon Knowledge Park

Administrative Executive

Sep 2024 – Apr 2026

- Managed operational documentation, scheduling, and workflow coordination
- Maintained structured records and reporting systems
- Coordinated internal communication and process documentation
- Developed strong organizational, communication, and process-management skills

Solar Secure Solutions, Remote

May 2024 – Aug 2024

AI and ML Intern

- Architected a multi-model Q&A system using Google's Gemini Pro API handle queries from text, images, documents and URLs.
- Integrated AstraDB with Sentence Transformers, enabling high-performance semantic search capabilities using vector embedding's.
- Monitored and debugged LLM performance with LangSmith, improving model reliability and prompt analytics.
- Designed a responsive Flask web interface and deployed the scalable, containerized applications using Docker and Render

RacksonIT Developers Pvt Ltd, Pune

Jan 2024 – May 2024

Data Science and Artificial Intelligence Intern

- Contributed to the development and deployment of an AI model for **solar panel fault analysis**, improving detection efficiency.
- Collaborated in building automated systems using Python, OpenCV and various machine learning frameworks.

Education

SIT, Yadav

Aug 2020 - Jun 2024

B.Tech in Artificial Intelligence and Data Science

CGPA: 7.06/10

Project Work

Intervux AI | AI-Powered Interview Intelligence Platform (Ongoing): [\[GitHub Repo\]](#)

- Architecting and developing an **AI-powered interview intelligence platform** for automated candidate assessment and recruiter insights.
- Built **scalable backend** services using **FastAPI** with modular, **production-grade architecture** and **WebSocket-based** real-time interview workflows.
- Designed **LLM-driven** response evaluation pipelines for **technical**, **communication**, and **reasoning-based scoring**.
- Developed an **adaptive candidate scoring** and **feedback engine** with structured performance analytics.
- Implemented **prompt-safe decision layers**, **fallback evaluation logic**, and **robust session state management**.
- Currently building **recruiter analytics dashboards**, **candidate ranking systems**, and **real-time AI scoring** workflows.

End-to-End MLOps Platform for Stock Forecasting: [\[GitHub Repo\]](#)

- Architected and deployed a full-stack, containerized **MLOps platform** using Docker, FastAPI and Streamlit.
- Engineered a multi-model data pipeline fusing **15+ years** of market data with **FinBERT-derived news sentiment**.
- Developed and tuned a **Transformer model**, achieving a final **R-squared of 0.823**.
- Implemented a complete MLOps workflow with **DVC** for versioning and **MLflow** for experiment tracking.
- Deployed the model to an interactive dashboard with a **Backtesting Engine** and **Data Drift Monitoring**.

Publications

The Hospital Management System, IRJMETS, Dec 2024 URL: <https://www.doi.org/10.56726/IRJMETS47223>

Awards and Certificates

- Data Science with Python – Simplilearn
- Natural Language Processing with Classification and Vector Spaces – Coursera
